

IN THE CLAIMS:

Please amend Claim 9 as follows:

9. (Amended) A process for the production of rigid foams containing urethane groups and predominately isocyanurate groups comprising reacting:

1) polyisocyanates;

with

2) from 30 to 90 parts by weight of compounds containing at least two isocyanate-reactive hydrogen atoms, having molecular weights of from 400 to 10,000, and containing branched chains;

in the presence of

3) one or more C₁ to C₆ hydrocarbons as the sole blowing agents;

4) from 10 to 60 parts by weight of flameproofing agents;

and

5) from 10 to 20 parts by weight of compounds containing at least two isocyanate-reactive hydrogen atoms and having molecular weights of from 32 to 399 as crosslinking agents;

and, optionally,

6) other known auxiliary agents and additives;

wherein the parts by weight of components (2), (4) and (5) totals 100 parts by weight, and wherein the reaction is conducted at an isocyanate index of from 200 to 600.
